Problem Statements on Agentic AI

Problem Statement No. 22 Interview Trainer Agent

The Challenge

An **Interview Trainer Agent**, powered by **RAG (Retrieval-Augmented Generation)**, prepares users for job interviews by generating tailored question sets and preparation strategies based on their profile, experience level, and job role.

Key Features

■ Role-Specific Question Retrieval

Retrieves role-specific interview questions, industry expectations, behavioral scenarios, and HR guidelines from recruitment portals, professional networks, and company interview databases.

■ Personalized Preparation

Users can input their resume or job title, and the agent provides targeted questions, model answers, and improvement tips — all customized to their background.

■ Technical & Soft Skill Coverage

Supports both technical and soft skill assessment, ensuring a comprehensive interview preparation experience for all domains.

■ Confidence Building

Builds user confidence, sharpens responses, and increases success rates in competitive hiring environments through iterative practice and feedback.

How It Works

1. User inputs their resume, job title, or desired role into the agent.
2. The RAG engine retrieves relevant questions, industry benchmarks, and HR expectations.
3. The agent generates a personalized question set with model answers and tips.
4. User practices responses; the agent provides feedback and suggestions for improvement.
5. Iterative sessions adapt to the user's progress and evolving preparation needs.

Expected Impact

This AI-driven assistant bridges the gap between candidates and competitive job markets. By providing accessible, personalized, and data-driven interview coaching, it empowers students and professionals to enter the workforce with confidence and preparation.

■ Technology Stack

Use of IBM Cloud Lite services / IBM Granite is mandatory.
